

Query #1

Marketing wants to find out which products get ordered together, particularly in threes. Report out the sets of three products that get ordered together in the same customer order and the total number of orders that show all three of those products. Be sure that the same three products do not show up more than once. For instance, there should not be one row in your output with product A, B, and C and then another row with the products B, C, and A. Order the output by the number of orders that the three products occur together, in descending order. Only show those combination of products that appear in more than 20 orders. Returns 56 rows. There are (as always) several ways to approach this. For this exercise, please do this by joining three subqueries together. Each of the inline queries will just require a join between orderDetails and Products

1. The original Query

```
SELECT product1.PRODUCTNAME AS Product1, product2.PRODUCTNAME AS
Product2,
product3.PRODUCTNAME AS Product3 FROM
  (SELECT orderNumber, ProductName, orderDetails.PRODUCTCODE FROM
orderDetails INNER JOIN
  PRODUCTS ON orderDetails.PRODUCTCODE = products.PRODUCTCODE) AS
product1 INNER JOIN
  (SELECT orderNumber, ProductName, orderDetails.productCode FROM
orderDetails INNER JOIN
  PRODUCTS ON orderDetails.PRODUCTCODE = products.PRODUCTCODE) AS
product2
  USING(orderNumber) INNER JOIN
  (SELECT orderNumber, ProductName, orderDetails.productCode FROM
orderDetails INNER JOIN
  PRODUCTS ON orderDetails.PRODUCTCODE = products.PRODUCTCODE) AS
product3
  USING(orderNumber)
WHERE product2.PRODUCTCODE != product1.PRODUCTCODE AND
product2.PRODUCTCODE != product3.PRODUCTCODE
AND product3.PRODUCTCODE != product1.PRODUCTCODE AND
product1.PRODUCTCODE < product2.PRODUCTCODE AND
product2.PRODUCTCODE < product3.PRODUCTCODE
GROUP BY product1.PRODUCTNAME, product2.PRODUCTNAME,
product3.PRODUCTNAME,
product1.PRODUCTCODE, product2.PRODUCTCODE, product3.PRODUCTCODE
HAVING COUNT (*) > 20
ORDER BY COUNT(*) DESC;
```

2. The view(s) that you have created.

```
CREATE VIEW ProductPerOrder AS
(SELECT OrderNumber, ProductName, Products.ProductCode FROM
orderDetails INNER JOIN Products ON
orderDetails.PRODUCTCODE = Products.PRODUCTCODE);
```

3. The refactored version of the query, that uses the view.

```
SELECT p1.PRODUCTNAME AS Product1, p2.PRODUCTNAME AS Product2,
p3.PRODUCTNAME AS Product3
FROM ProductPerOrder p1 INNER JOIN ProductPerOrder p2 USING(orderNumber)
INNER JOIN ProductPerOrder p3 USING(orderNumber)
WHERE p1.PRODUCTCODE != p2.PRODUCTCODE AND p2.PRODUCTCODE !=
p3.PRODUCTCODE AND p1.PRODUCTCODE!= p3.PRODUCTCODE
AND p1.PRODUCTCODE< p2.PRODUCTCODE AND p2.PRODUCTCODE <
p3.PRODUCTCODE
GROUP BY p1.PRODUCTNAME, p2.PRODUCTNAME, p3.PRODUCTNAME,
p1.PRODUCTCODE, p2.PRODUCTCODE, p3.PRODUCTCODE
HAVING COUNT (*) > 20
ORDER BY COUNT(*) DESC
```

4. The output from running the original query

PRODUCT1	PRODUCT2	PRODUCT3
1 The Titanic	The Queen Mary	Pont Yacht
2 Corsair F4U (Bird Cage)	America West Airlines B757-200	American Airlines: MD-11S

ORDER BY COUNT(*) DESC);
```

Query #2

Find each pair of customers and the products that they have both ordered for all pairs of customers who have ordered the same product during the first two months of 2015. Do not repeat customer pairs. You will want to create two subqueries that join customers to orders to order details to products. Order by the first customer name, then the second customer name, then the name of the product that they have ordered in common. Returns 84 rows.

1. The original Query

```
SELECT one.customerName, two.customerName, one.productName
FROM (SELECT c.customerName, c.customerNumber,
            d.productCode, p.productName
      FROM customers c
      INNER JOIN orders o
      ON c.customerNumber = o.customerNumber
      INNER JOIN orderDetails d
      ON o.orderNumber = d.orderNumber
      INNER JOIN products p
      ON d.productCode = p.productcode
      WHERE (o.orderDate BETWEEN '2015-01-01' AND '2015-02-28')) AS one
INNER JOIN
  (SELECT c.customerName, c.customerNumber,
        d.productCode, p.productName
    FROM customers c
    INNER JOIN orders o
    ON c.customerNumber = o.customerNumber
    INNER JOIN orderDetails d
    ON o.orderNumber = d.orderNumber
    INNER JOIN products p
    ON d.productCode = p.productcode
    WHERE (o.orderDate BETWEEN '2015-01-01' AND '2015-02-28')) AS two
ON one.productCode = two.ProductCode
WHERE one.customerNumber < two.CustomerNumber
ORDER BY one.customerName, two.customerName, one.productName;
```

2. The view(s) that you have created.

```
CREATE VIEW ProductOrderedByCustomer AS
  (SELECT c.customerName, c.customerNumber,
        d.productCode, p.productName
    FROM customers c
    INNER JOIN orders o
    ON c.customerNumber = o.customerNumber
```

```

INNER JOIN orderDetails d
ON
    o.orderNumber = d.orderNumber
INNER JOIN products p
ON
    d.productCode = p.productcode
WHERE (o.orderDate BETWEEN '2015-01-01' AND '2015-02-28'));

```

3. The refactored version of the query, that uses the view.

```

SELECT one.customerName, two.customerName, one.productName
FROM ProductOrderedByCustomer one
INNER JOIN ProductOrderedByCustomer two
ON
    one.productCode = two.productCode
WHERE one.customerNumber < two.CustomerNumber
ORDER BY one.customerName, two.customerName, one.productName;

```
